Sirocco Fan with Silencer Box

Single suction double-supported belt drive type with sound deadening box

Product Description

- A sirocco fan whose main purpose is to reduce noise by absorbing sound with a sound absorbing material and shielding with a sound deadening box. The optimum selection can be made frequently by increasing the rotation speed.
- CLF6 / CLF5 type sirocco fan has lower rotation speed and lower noise than conventional products. Sufficient performance is demonstrated at low speeds, and at the same time noise generation is suppressed.
- Easy installation with box shape. In addition, since the suction and discharge are linear, it becomes easier.
- Ideal for local air supply and exhaust where machine room equipment is difficult.
- Vibration isolation rubber is included as standard, so you can take full care of vibration isolation.

Use

For general air blowing and exhaust

For air conditioning and ventilation

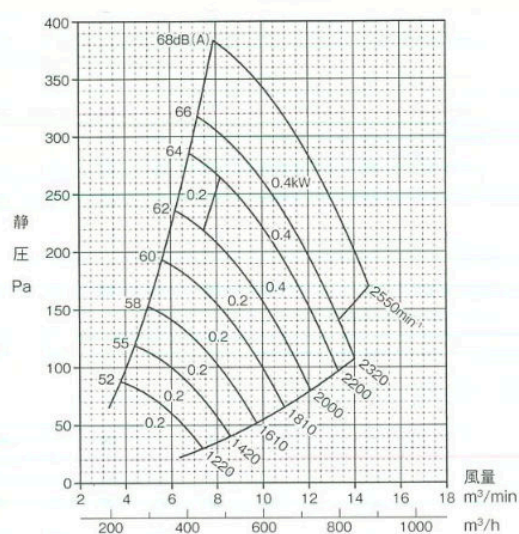

For air supply and exhaust

Handling Fluid : Air

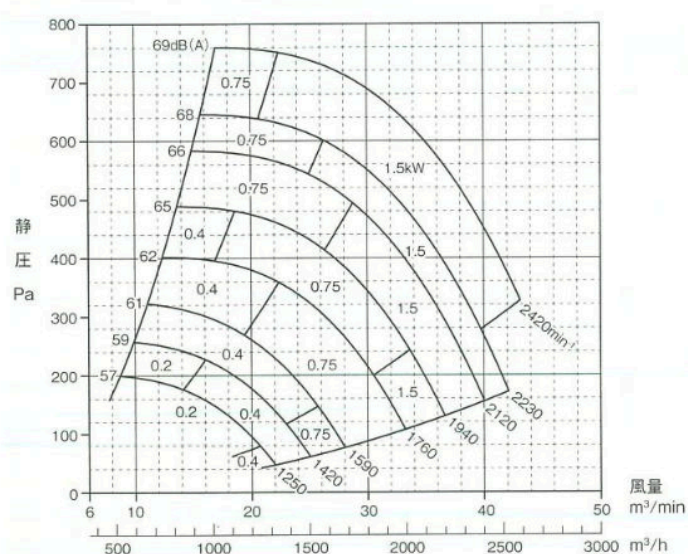

Fluid Temperature : 0 ~ 40°C
