Automatic, Convenience, and Elegance

➤ Automatic And Convenient Operation

Power is restored immediately in the case of utility electricity power failure - even if you're not at home.

➤ Quiet

The sound proof enclosure keeps the noise under 70 dB(A) @ 7 meters (*quieter than vacuum cleaner!!*)

➤ Fast Restoration of Power

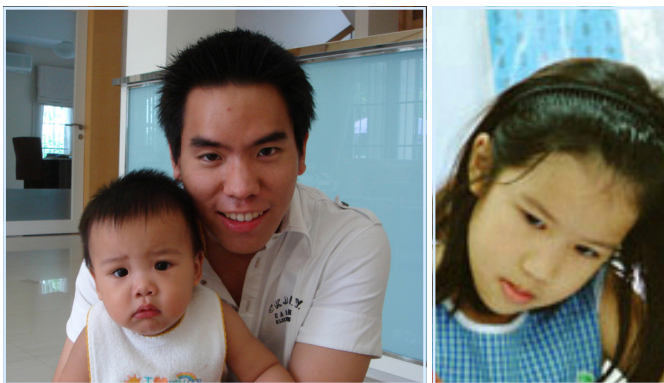

KOHLER generators restore power within 10 seconds.

➤ Clean Digital Power

KOHLER generators are certified EPA standards for environmental protection and feature the industry's only true digital power.

➤ Easy to Install And Service

KOHLER generators with sound proof enclosures are available from 6–504 kW units ready for place and run with 24 hours emergency service professionals to support.

Now every home you build is built generator ready.

KOHLER®

How Backup Power System Works?

Automatic Transfer Switch

When power back-off, Generator system will power-up for you.

The three components to make your backup power system work include:

- ➔ KOHLER Residential Generators
- ➔ Automatic Transfer Switch (ATS)
- ➔ Distribution Panel

KOHLER Generators sets generates the emergency electrical power when the normal electricity power back-off.

The automatic transfer switch continually monitors

the incoming utility electricity power for all kinds of interruptions, such as drops in voltage or no electrical voltage. When such cases happen, the automatic transfer switch would automatically start the generator system, transfers the electrical loads and restores power to your home in less than 10 seconds. When utility electricity power resumes, the transfer switch reverses the process...again, automatically!

To bring a complete power system solution at your home, Tharikan Co., Ltd. and its electricity power professionals are ready to assist you in backup power system design and installation.
